  DESCRIPTION OF SETTINGS OF SET
```

```
313 ctgagagctgaggacaccgctgtctattactgtgtgaaagaagggtttggttcagtagtg 372
   04372 encodes the complete heavy chain from the leader through AAs 242. 88BV59 uses VHII1 and a D region which may have resulted from intra D-D recombination and/or gene conversion along with somatic mutation. It is radically different from any germ line D region. It utilises germ line JH3. It is of note that a cysteine at AA posn. 59 (AA No. 78 in R38161) is present within the 88BV59 VH. No other human variable region heavy chains have a cysteine at this posn. i.e. Kabat posn. 59.

Y202, Y103; Y21; Y24; 3-31, M84; M118 and M131, by PCR constructs were isolated from high molecular weight DNA from human constructs were sparated from high digested with Tag1 restriction enzyme. The DNA was partially digested with Tag1 restriction enzyme. The fragments were ligated with Call-digested cosmid verter pJB81. The ligation products were in vitro packed and infected into E. coli 490A. The fragments were then subcloned by colony useful in producing human immunoglobulin in mammalian hosts.

```
DNA fragment comprising human immunoalobulin Vh genes - for the production of human immunoglobulin in mammalian hosts claim 38, Page 69-70. 130pp; Japanese.

A series of genes (978939-79002) encoding human immunoglobulin variable heavy chains The genes were isolated and cloned from a series of cosmid constructs; V102; V103; V104; V5,V24, 3-31, M84, M18 and M131, by FCR amplification using primers (978917-38. The genes are subdivided into 5 families of Vh genes. The fragments cover a region of 800 kb. The DNA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially dispersed with Tagi restriction enzyme. The fragments were separated by gel electophoresis and 35-45 kb fractions
The DNA sequence of eleven monoclonal antibodies are represented in 0119145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDP 1. 2, and 3 regions, which may be selected from different antibody mols. having varied binding specificity. The chimmeric anti-RhD antibodies can be used for diagnosis and therapy, and are capable of providing blood. Lyping reagents of high specificity and reliability. They can also be used in passive immunisation to prevent haemolytic disease of the

A cDNA clone (144089) derived from human gut-associated lymphoid issue codes for the heavy chain (w07614) of recombinant UcpANCA Fab clone 5-4. Anti-neutrophil cytoplasmic antibody characterised by perinuclear neutrophil staining pattern (pANCA) associated with ulcrative colitis (UC) was recombinantly produced and characterised using a phage display technique. Libraries of VH-and VL-encoding DNA homologues having the immunoreactivity of UCPANCA antigen were created. Recombinant UCPANCA Fab clones 5-3
  Antibody material associated with ulcerative colitis - comprising anti-neutrophil cytoplasmic antibody, characterised by perinuclear neutrophil staining patters.
   These can be used in

   Claim 10; Page 17: 20pp. Japanese.

Claim 10; Page 17: 20pp. Japanese.

Cholls (15013 represent the coding sequences for the heavy and light chains of the human monoclonal antibody of the invention. The antibody of the invention are complementarity determining region-1 (CDR-1) of the heavy chain variable requence represented by W13913 in the CDP-3 of the light chain variable sequence represented by W13913 in the CDP-3 of the light chain variable requence represented by W13913 in the CDP-3 of the light chain variable virus antigon. A human anti-HB virus monoclonal antibody preparation which is highly safe and is effective to adr type HB vIrus can be vaccine against HB infection. It can also be used as a sequence 357 HB. The W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of the W193 of W

Monoclonal antibody PEI-1 Wh region coding sequence.
Heavy chain, light chain, variable region; human; monoclonal antibody; limmunisation; hepatitis E virus; HEV; varwine; mouse; fusior; xengoaecic; peripheral blood lymphocyte; surface antigen; cell culture; ion exchange; chomoatography, size separation, primer, PCR, polymerase chain reaction; amplification, hybridoma, infection, immunosuppression, hepatitis; liver transplant; ss.
   :
:
  Human monoclonal antibodies specific for hepatitis B surface antiden are used to treat or prevent infection or in diagnostic assays claim 9; Column 27-28; 26pp; English.

Monoclonal antibodies effective for the diagnosis and treatment of diseases caused by infection with hepatitis B have been prepared from cell line obtained by fusing a xenogeneic hybridoma designated SPAZ 4 with blood cells of a patient immunised with hepatitis B vaccine. Specific antibodies are PEI-1, ZMI-1, ZMI-2, MD3-4 and L03-3, each of these per per present sequence encodes the heavy variable chain of PEI-1.

DEFINITION DA75C05.s1 NCI_CGAP_BB11.1 Homo sapiens cDNA clone 964424 similar to qb:x14584 IG HEAVY CHAIN PRECURSOR V-III PEGION (HUMAN);.
ACCESSION AA507475
  CDNA Library Preparation: M. Bento Soares, Ph.D.

CDNA Library Arrayed by: Greg Lennon, Ph.D.

DNA Sequencing by: Washington University Genome Sequencing Center
Clone distribution: NOTICARP clone distribution information can be
found through the I M A G E Consortium/LLNL at:
   polyinker: pTTT3D-Pac (Pharmacia) with a modified polyinker: 1st strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I oligo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pTTT3 vector. Library is not normalized (The normalized version of this library is NCI_CGAP_BEL.) Library was constructed by Bento Soares and M. Fatima Bonaldo."

Pharmacia) with a modified polylinker host-DHIOB (ampicillin resistant) primer-MINRPI Esitel-Not I Rsite2-Eco RI Adult human. Ist strand cDNA was primed with a Not I - oligo(dI) primer [5' TOTIACCAATCTGAACTGGACCTCCTTITITITITITITITITI 3'], double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT713 vector (Pharmacia), Library went through one round of normalization to a Cot = 20. Library constructed by Benio Scares
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Dukaryotae; Metazoa; Eumetazoa; Bilateria; Coelomata; Deuterostomia; Chordata; Vortebrata; Gnathostomata; Csteichthyes; Barcopteryqii; Choanata; Tetrapoda; Amniota; Mammalia; Therla; Butheria; Archonta; Primates; Catarrhini; Hominidae; Homo. The CDNA was oligo (dT) primed with an Xhol restriction enzyme recognition site and an 18 base poly dT sequence. For the 5' en the synthesized cDNA termini were treated with T4 DNA polymerase and EcoRI adaptors were ligated to the blunt ends.

Patent No. 565218

GENERAL INFORMATION:
APPLICANT: Burton, Dennis R
APPLICANT: Burton, Carlos F
APPLICANT: Lerner, Pichard A
TITLE OF INVENTION: HUMAN NEUTRALIZING MONOCLONAL ANTIRONIES
TITLE OF INVENTION: TO HIMAN IMMINIBERIORY VIBIS
NUMBER OF SEQUENCES: 170
CORPESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                        TITLE OF INVENTION: HUMAN NEUTRALIZING MONOTIONAL ANTIBODIES TITLE OF INVENTION: TO HUMAN IMMUNODEFICIENCY VIRUS NUMBER OF SEQUENCES: 170
                                                                                                                                                                                                                                                                                                                       NUMBER OF SEQUENCES 170
COMPUTER PRADABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25 (EPU)
